

SeaSafe™

ALL NATURAL FERTILIZER

WATERWAY SAFE

8-0-2

SeaSafe organic fertilizer contains only a trace of organic phosphorous making it safe to use near lakes and other waterways that are in danger of contamination. *SeaSafe* contains all natural organic nitrogen that is 100% water insoluble. Eliminating the possibility of nitrogen leaching into lakes, streams, and estuaries.

SeaSafe does not contain any manure, sewage sludge, or salts.

SeaSafe organic soybean based SPRAYABLE fertilizer allows plants to feed the way nature intended. Promotes increased microbial activity in the soil. Produces vigorous plants with sustained growth.

SeaSafe provides plants with nitrogen, phosphorus, potassium, calcium, iron, magnesium, copper, manganese, molybdenum, and zinc in an all-natural powder form that is easily sprayed. In addition to the minerals, *SeaSafe* has a large number of amino acids, numerous vitamins, folic acid, thiamine, biotin, and riboflavin. The “no-burn” organic formula allows for foliar applications thought out the year.

SeaSafe stimulates microbial soil activity. Providing organic materials and nutrients in balanced ratios that make it possible for indigenous soil microorganisms to thrive and proliferate. Microbes utilize organic matter to create nutrients that are available to plants through the decomposition process. These nutrients are then stored in the soil in a manner that makes them readily available to plants when needed. And *SeaSafe* increases the cation exchange capability, know as “CEC”, which improves the plants ability to uptake these nutrients.

Programmed applications will not only improve the soil environment, plant health, growth, and vigor, but will decrease pathogenic activities resulting in less disease and the need for chemical controls.

SeaSafe is a highly concentrated carbohydrate-protein product that mixes instantly with water and agitation for worry-free easy spraying. One all natural product that provides nutrients for both plant and soil.

SeaSafe is safe for applicators, pets, and children.

University studies have shown *SeaSafe* is the ideal choice providing an all-natural solution to good plant health and improving the soil environment.
